

dispatchRepolImport

Command Reference

Table of contents

1 Description.....	2
2 Usage.....	2

1. Description

Dispatches the repository import command to builder resources.

Dispatches the repoImport command to all builder (child) resources. Note that the builder resources must be co-deployed with their "master" builder since the command uses the "localdispatch" strategy.

2. Usage

```
ctl -t Builder -o <objectname> -c dispatchRepoImport
[-buildstamp <>] [-resourcename <>] [-resourcetype <>]
[-strategy <>]
```

2.1. Options

Option	Description	Type	Default
buildstamp	<i>the build identifier</i>	string	<code>\${entity.attribute.buildstamp}</code>
resourcename	<i>resource name pattern</i>	string	
resourcetype	<i>resource type name</i>	string	
strategy	<i>dispatch execution strategy</i>	string
