

Docs-Verify

Command Reference

Table of contents

1 Description.....	2
2 Usage.....	2

1. Description

Verify the documents generated by Docs-Generate.

The Docs-Verify command generates all the defined template based documents to a temporary location and then compares them to the ones last generated by [Docs-Generate](#). If any differences are found an error is raised. This command can be useful to determine if modifications occurred outside the framework.

2. Usage

```
ctl -t Deployment -o <objectname> -c Docs-Verify
```
