1. Description

Add a resource relationship

Creates a resources relationship between two objects. The `resourcetype/resourcename` options specify what will be the child resource object.

Inspired from Deployment#Register-Dependency

static: This command can be run outside of an object context.

2. Usage

```
ctl -m modelutil -c resource-add -depot <> -name <>
-resourcename <> -resourcetype <> -type <>
```

2.1. Options

Option	Description	Type	Default
depot	<i>project depot name</i>	string	<code>\${context.depot}</code>
name	<i>logical node name</i>	string	
resourcename	<i>the resource name</i>	string	
resourcetype	<i>the resource type</i>	string	
type	<i>the node type</i>	string	

3. Examples

Create a resource relationship between two objects already defined in the model

```
ctl -p demo -t modelutil -c resource-add --\
-name strongbad -type Node -resourcename tomcat1
-resourcetype Service
```
