

Type Reference

- [ActiveMQ](#): An ActiveMQ deployment
- [ActiveMQZip](#): Standard platform zip format package
- [AntBuilder](#): A simple Builder to interface with Ant
- [AntZip](#): An Apache Ant Distribution Package
- [Apache](#): Manages an Apache HTTP server
- [ApacheSystemService](#): Apache System Service Module
- [BatBuilder](#): A simple Builder to interface with Windows batch script based builds
- [BitTorrentBuilder](#): BitTorrent torrent file builder based on the CreateTorrent utility by Daniel Etzold
- [BitTorrentClient](#): BitTorrent client management service
- [BitTorrentFile](#): BitTorrent "torrent" file
- [BitTorrentTracker](#): BitTorrent tracker server
- [CTierInstallerZip](#): ControlTier Installer Package zip
- [ClientInstaller](#): client installer module
- [ConfigZip](#): Configuration zip archive
- [ContentZip](#): A generic Content zip package
- [ContinuousIntegration](#): Continuous integration server
- [CruiseControl](#): Cruise Control continuous integration facility
- [CruiseControlService](#): Run Cruise Control as a Windows service using Tanuki Software's Java Service Wrapper facility
- [CruiseControlZip](#): Zip archive of Cruise Control
- [DukesBankProjectBuilder](#): Builds projects used to manage instances of the Dukes Bank application
- [ElementsProjectBuilder](#): Builds and manages projects that use the Elements modules library
- [FireDaemonService](#): Service integration of FireDaemon Technologie's Windows Service wrapper
- [HsqldbRdb](#): A Hypersonic SQL database service
- [HsqldbRdbDmp](#): Hypersonic SQL database dump package
- [HsqldbRdbExportBuilder](#): Hypersonic SQL database export builder
- [HsqldbRdbSchema](#): A Hypersonic SQL database schema
- [HsqldbZip](#): Zip archive of the Hypersonic SQL Database
- [Hudson](#): Hudson continuous integration server
- [HudsonPlugin](#): Hudson Plugin (.hpi) file
- [HudsonWar](#): Hudson continuous integration server war package

- [ImageMagickTgz](#): ImageMagick tgz package
- [JBossAntBuilder](#): JBoss application Ant builder
- [JBossEar](#): ATG Java enterprise application archive package
- [JBossServer](#): A JBoss application server
- [JBossZip](#): A JBoss Distribution Package
- [JavaBin](#): A unix based self extracting java platform package
- [JavaServiceWrapper](#): Windows platform integration of Tanuki Software's Java Wrapper Service facility
- [JavaServiceWrapperZip](#): Zip archive of Tanuki Software's Java Service Wrapper facility
- [JavaZip](#): java zip package
- [JtdsJar](#): A platform jar package
- [MavenBuilder](#): A simple Builder to interface with Maven
- [MavenZip](#): Zip archive of Maven
- [Mule](#): Mule Enterprise Service Bus
- [MuleUserJar](#): Jar archive of the user contributed Mule assets destined for "\$MULE_HOME/lib/user"
- [MuleZip](#): Zip archive of the Mule distribution
- [MysqlRdb](#): A MySQL database instance
- [MysqlSchema](#): A mysql schema
- [OpenLDAP](#): OpenLDAP Lightweight Directory Access Protocol Server
- [PackedWar](#): Packed (unexploded) web archive package
- [PlatformJar](#): A platform jar package
- [PlatformZip](#): Standard platform zip format package
- [PostgresRdb](#): PostgreSQL server system service module
- [PostgresRdbSchema](#): A PostgreSQL database schema
- [PuppetClient](#): Puppet client management service
- [PuppetMaster](#): The Puppet Master service
- [Rdb](#): A relational database service
- [RdbSchema](#): Represents a database schema
- [RpmBuilder](#): An RPM package builder.
- [SolidcoreController](#): Models the Solidcore controller's management of a set of nodes
- [SolidcoreHost](#): Solidcore S3 System Host Service
- [Squid](#): Squid caching proxy server
- [SystemService](#): Unix/Linux system service module
- [Tomcat](#): Mediates administration of a Tomcat server and a set of one or more associated contexts. DEPRECATED
- [TomcatAntBuilder](#): Ant builder with specialized defaults for Tomcat applications
- [TomcatContext](#): Tomcat web application service (extended to support a custom context and an "external" property file)
- [TomcatServer](#): Apache Tomcat server deployment

- [TomcatServerService](#): Run TomcatServer as a Windows service using Tanuki Software's Java Service Wrapper facility
- [TomcatSite](#): Centralized management for a set of Tomcat based application server instances and contexts.
- [TomcatZip](#): Zip archive of Apache Tomcat
- [WarUpdater](#): Updater for J2EE web archive based applications
- [WindowsService](#): Automate Windows Service Control
- [ZipBuilder](#): Simple builder to create a Zip file package of the "basedir" (deployment-basedir) in the "targetdir" (deployment-install-root) using the object name as file name and timestamp versioning
