

Install

Command Reference

Table of contents

1 Description.....	2
2 Usage.....	2

1. Description

Install the deployment, and its module and properties to AntDepo.

Installs the object into the local AntDepo project depot. The Install command is essentially a command workflow that calls the Install-Module and [Get-Properties](#) command (though there are boolean flags to skip those commands).

2. Usage

```
ctl -t Deployment -o <objectname> -c Install [-basedir
<${entity.instance.dir}>] [-depot <>] [-name <>] [-nodir]
[-nomodule] [-noprocessview] [-noproperties] [-subdirs <>]
[-type <>]
```

2.1. Options

Option	Description	Type	Default
basedir	<i>instance directory</i>	string	<code>\${entity.instance.dir}</code> / <code>\${entity.deployment-basedir}</code>
depot	<i>project depot</i>	string	<code>\${context.depot}</code>
name	<i>object name</i>	string	<code>\${context.name}</code>
nodir	<i>do not create directories</i>	boolean	
nomodule	<i>do not update module</i>	boolean	
noprocessview	<i>do not update process view</i>	boolean	
noproperties	<i>do not update properties</i>	boolean	
subdirs	<i>directory list</i>	string	<code>\${entity.attribute.subdirs}</code>
type	<i>object type</i>	string	<code>\${context.type}</code>
