

repoExport

Command Reference

Table of contents

1 Description.....	2
2 Usage.....	2

1. Description

Export package files from the repository.

Processes results of [repoFind](#) and exports each package file from the repository - getting the file from the webdav and copying it to the target location.

2. Usage

```
ctl -t Builder -o <objectname> -c repoExport [-buildstamp <>]
[-destination <>] [-packagename <.*>] [-packagetype <[^\.]*>]
[-session <repoFind.session>]
```

2.1. Options

Option	Description	Type	Default
