

Get-Process-View

Command Reference

Table of contents

1 Description.....	2
2 Usage.....	2

1. Description

Get the process view XML for a command invocation

The Get-Process-View command retrieves the XML document describing a particular command invocation in the process-flow-xml format.

If the command option is included, only generates process flow view for that command, otherwise it generates it for all commands for the given entity.

2. Usage

```
ctl -t Deployment -o <objectname> -c Get-Process-View
[-command <>] -file <> -name <> -node <> -type <>
```

2.1. Options

Option	Description	Type	Default
<code>command</code>	<i>command name</i>	string
