purge-objects

Command Reference

Table of contents

1. Description

Delete objects in the repository from the results of find-objects.

Purge-objects reads input generated by [find-objects](#) and for each object listed in the specifed session, removes it from the active model on the server.

If the `ignoreparents` flag is specified, then the object will be removed even if it is a child dependency of another object.

2. Usage

```
ctl -t ProjectBuilder -o <objectname> -c purge-objects
[-ignoreparents] [-name <.*>] [-session <find.session>] [-type
<[^\.]*>]
```

2.1. Options

Option	Description	Type	Default
ignoreparents	*ignore parent dependencies*	boolean	
name	*resource name*	string	.*
session	*session name*	string	find.session
type	*resource type*	string	[^\.]*
