

# **extract**

## **Command Reference**

### **Table of contents**

1 Description.....	2
2 Usage.....	2

## 1. Description

*Retrieve an archived resource and extract it*

Retrieves the resource from the WebDAV and extracts it to the specified directory.

The archive extraction support is based on currently installed modules of the [Package](#) type.

*static:* This command can be run outside of an object context.

## 2. Usage

```
ctl -m davutil -c extract [-clean] -dir <> [-password <>]
[-type <zip>] -url <> [-username <>] [-verbose]
```
