resource-remove

Command Reference

Table of contents

1. Description

Remove a resource relationship

Removes a resources relationship between two objects. The resourcetype/resourcename options specify what is the child resource object.

static: This command can be run outside of an object context.

2. Usage

```
ctl -m modelutil -c resource-remove -depot <> -name <>
-resourcename <> -resourcetype <> -type <>
```

2.1. Options

Option	Description	Type	Default
depot	*project depot name*	string	${context.depot}
name	*logical node name*	string	
resourcename	*the resource name*	string	
resourcetype	*the resource type*	string	
type	*the node type*	string	

3. Examples

Rmove a resource relationship between two objects already defined in the model

```
ctl -p demo -t modelutil -c resource-remove --\
             -name strongbad -type Node -resourcename tomcat1
-resourcetype Service
```
