1. Overview

Windows platform integration of Tanuki Software's Java Wrapper Service facility

This type manages the Tanuki Software Java Wrapper Service, and allows a dependent Service object to be automatically deployed.

A [JavaServiceWrapperZip](#) object should be added as a child dependency.

A Service object should also be added as a child dependency.

Appropriate [Settings](#) should be added to JavaServiceWrapper object to configure the appropriate Java based configuration to run the underlying Service.

An example of using JavaServiceWrapper for managing the [JBossServer](#) type is here: [Windows service example](#).

See: [Tanuki Software Ltd. - Java Service Wrapper](#).
