JtdsJar

Table of contents

1. Overview

A platform jar package

1.1. Intent

Manage the jTDS jar library dependencies for the referring deployment such as an application server. This module is a subtype of the PlatformJar and can be used as a depedendent constraint for the referring deployment.

1.2. Problem

Application servers such as Tomcat, JBoss, etc often require third party libraries such as a jdbc driver to be installed into a common library directory. This module allows such a library to be managed and installed into the specific location required by the container.

2. About Commands

This module does not have any implementation and exists for contraint purposes such as a dependency of an application server like JBoss or Tomcat.
