1. Overview

Represents a database schema

1.1. Intent

The RdbSchema object is a deployment representing a database schema which is typically a dependency of an Rdb (database service) object. Schemas are modeled so that there are the following tiers:

- AppServer such as a [JBossServer](#) object depending on:
- Database Server such an [Rdb](#) object depending on:
- RdbSchema objects

Typically these objects are accessible from the application server in order to generate its datasource configuration.
