# runBuildScript

## Command Reference

### Table of contents

## 1. Description

*Invoke the build tool.*

Invokes the build tool providing needed parameters. This is a trivial implementation that simply evaluates the specified buildscript via Ant.

## 2. Usage

```
ctl -t Builder -o <objectname> -c runBuildScript [-basedir <>]
[-buildfile <>] [-buildstamp <>] [-target <>] [-targetdir <>]
```

## 2.1. Options

| Option | Description | Type | Default |
|--------|-------------|------|---------|
| basedir | *directory where build resources reside* | string | ${entity.attribute.basedir} |
| buildfile | *build file to execute* | string | ${entity.attribute.buildFile} |
| buildstamp | *build identifier* | string | ${entity.attribute.buildstamp} |
| target | *build target to evaluate* | string | ${entity.attribute.buildTarget |
| targetdir | *directory build artifacts will be written* | string | ${entity.attribute.targetdir} |
