

# Packages-Install

## Command Reference

### Table of contents

1 Description.....	2
2 Usage.....	2

## 1. Description

*Install the configured package dependencies for the deployment.*

The Packages-Install command iterates over all the package object dependencies declared in the object context, and for each one, calls [Package](#)'s Install command.

It is possible to only install packages of a certain type using the `-resourceType` option.

## 2. Usage

```
ctl -t Deployment -o <objectname> -c Packages-Install
[-buildstamp <>] [-packageproximity <1>] [-resourcetype
<[^\.]*>]
```

### 2.1. Options

Option	Description	Type	Default
buildstamp	<i>build identifier. currently ignored</i>	string	
packageproximity	<i>package resource proximity</i>	string	1 / \${entity.attribute.defaultPack
resourcetype	<i>type name or type name regex of packages to install</i>	string	[^\.]*
