1 Description.....	2
2 Usage.....	2

1. Description

Gets the supertype module.

Looks up supertype module for the given module and for each one found, requests and installs it via Install-Module.

Note:

Since this command is only utilized by [Install-Module](#) and not normally called directly, it may be removed and made an internal function of Install-Module.

2. Usage

```
ctl -t Managed-Entity -o <objectname> -c Get-Supers [-depot
<>] [-module <>]
```

2.1. Options

Option	Description	Type	Default
depot	<i>project depot</i>	string	
module	<i>module name</i>	string
