

Change-Dependencies

Command Reference

Table of contents

1 Description.....	2
2 Usage.....	2

1. Description

Query model and switch package dependencies to the specified version or buildstamp.

Invokes the runChangeDependencies command inherited by [Deployment](#). If the "-dispatch" flag is used -OR- the "dispatchChangeDependencies" attribute is set, then instead the command is dispatched to the subordinated dependency objects.

2. Usage

```
ctl -t Mediator -o <objectname> -c Change-Dependencies
[-buildstamp <>] [-dispatch] [-resourcename <.*>]
[-resourcetype <[^\.]*>] [-version <>]
```

2.1. Options

Option	Description	Type	Default
buildstamp	<i>build identifier. Required if no -version opt</i>	string	<code>\${entity.attribute.buildstamp}</code>
dispatch	<i>dispatch command to child dependencies</i>	boolean	
resourcename	<i>resource name pattern</i>	string	<code>.* / \${entity.attribute.dispatchRes</code>
resourcetype	<i>resource type name</i>	string	<code>[^\.]* / \${entity.attribute.dispatchRes</code>
version	<i>package version. Required if no -buildstamp opt</i>	string
