

purge-objects

Command Reference

Table of contents

1 Description.....	2
2 Usage.....	2

1. Description

Delete objects in the repository from the results of *find-objects*.

Purge-objects reads input generated by [find-objects](#) and for each object listed in the specified session, removes it from the active model on the server.

If the `ignoreparents` flag is specified, then the object will be removed even if it is a child dependency of another object.

2. Usage

```
ctl -t ProjectBuilder -o <objectname> -c purge-objects
[-ignoreparents] [-name <.*>] [-session <find.session>] [-type
<[^\.]*>]
```

2.1. Options

Option	Description	Type	Default
<code>ignoreparents</code>	<i>ignore parent dependencies</i>	boolean	
<code>name</code>	<i>resource name</i>	string	<code>.*</code>
<code>session</code>	<i>session name</i>	string	<code>find.session</code>
<code>type</code>	<i>resource type</i>	string	<code>[^\.]*</code>
