

refactor-rename

Command Reference

Table of contents

1 Description.....	2
2 Usage.....	2

1. Description

Replace text within matching files of a directory. (deprecated)

Deprecated. See [textutil#replace](#)

If `project` option is specified, then only files that appear to be Jena models for that project name will be modified. (Having the file name pattern `"*_U${opts.project}"`). Otherwise, any files with extensions as listed in the `exts` option (sans-periods) will be modified.

2. Usage

```
ctl -t ProjectBuilder -o <objectname> -c refactor-rename
[-basedir <>] [-exts
<.xml,.properties,.txt,.rdf,.html,.n3,.conf>] -pattern <>
[-project <>] -replace <>
```

2.1. Options

Option	Description	Type	Default
<code>basedir</code>	<i>directory to search</i>	string	<code>\${entity.attribute.basedir}</code>
<code>exts</code>	<i>comma-separated list of extensions to search</i>	string	<code>.xml,.properties,.txt,.rdf,.ht</code>
<code>pattern</code>	<i>pattern to find</i>	string	
<code>project</code>	<i>name of project for model replacement only</i>	string	
<code>replace</code>	<i>string to replace pattern with</i>	string
