2 Usage.....	2

1. Description

get environment info

The `env` command looks up values of environment variables. Use the `-key` option to specify a particular key to lookup. If no key option is specified all environment variables are printed.

Format: Uses YAML to print lookup results.

Example: Print the value of the `CTL_BASE` variable

```
$ ctl -m shellutil -c env -- -key CTL_BASE
---
CTL_BASE: /ctier/ctl
```

static: This command can be run outside of an object context.

2. Usage

```
ctl -m shellutil -c env [-format <plain>] [-key <.*>] [-output <>]
```

2.1. Options

Option	Description	Type	Default
<code>format</code>	<i>output format</i> formats: <ul style="list-style-type: none"> plain: key=val pairs one per line yaml: use YAML format 	string	plain
<code>key</code>	<i>env key</i>	string	.*
<code>output</code>	<i>output file</i>	string
