OpenLDAP

Table of contents

1. Overview

OpenLDAP Lightweight Directory Access Protocol Server

This is a minimal implementation of a service module to support deployment of the OpenLDAP "slapd" process.

The assumption is made that "slapd" will run as the ControlTier framework user on a non-standard, non-privileged port.

Additionally, the OpenLDAP package must be pre-installed on the system and the "slapd.conf" file manually configured. A future version of this module will no doubt generate this configuration file from model data and a template.
