

generateManifest

Command Reference

Table of contents

1 Description.....	2
2 Usage.....	2

1. Description

Generate list of files to package.

Uses the base directory, includes and excludes attributes/options to create a package type independent list of files and directories to include in the package(s). The list is stored in the file designated by the manifest option/attribute.

2. Usage

```
ctl -t RpmBuilder -o <objectname> -c generateManifest
[-basedir <>] [-buildstamp <>] [-excludes <>] [-includes <>]
[-manifest <>] [-targetdir <>]
```

2.1. Options

Option	Description	Type	Default
basedir	<i>directory where build resources reside</i>	string	<code>\${entity.attribute.basedir}</code>
buildstamp	<i>build identifier</i>	string	<code>\${entity.attribute.buildstamp}</code>
excludes	<i>directories and files to exclude from the package</i>	string	<code>\${entity.attribute.packageExcl}</code>
includes	<i>directories and files to include in the package</i>	string	<code>\${entity.attribute.packageIncl}</code>
manifest	<i>package manifest file name</i>	string	<code>\${entity.attribute.packageMani}</code>
targetdir	<i>directory build artifacts will be written</i>	string	<code>\${entity.attribute.targetdir}</code>
